

ACF

(AUTOMATIC CARTON FREEZER)

Flexible

The ACF handles random box sizes and can be extended for additional product types. Temperature zoning allows the product to have its own cooling recipe.

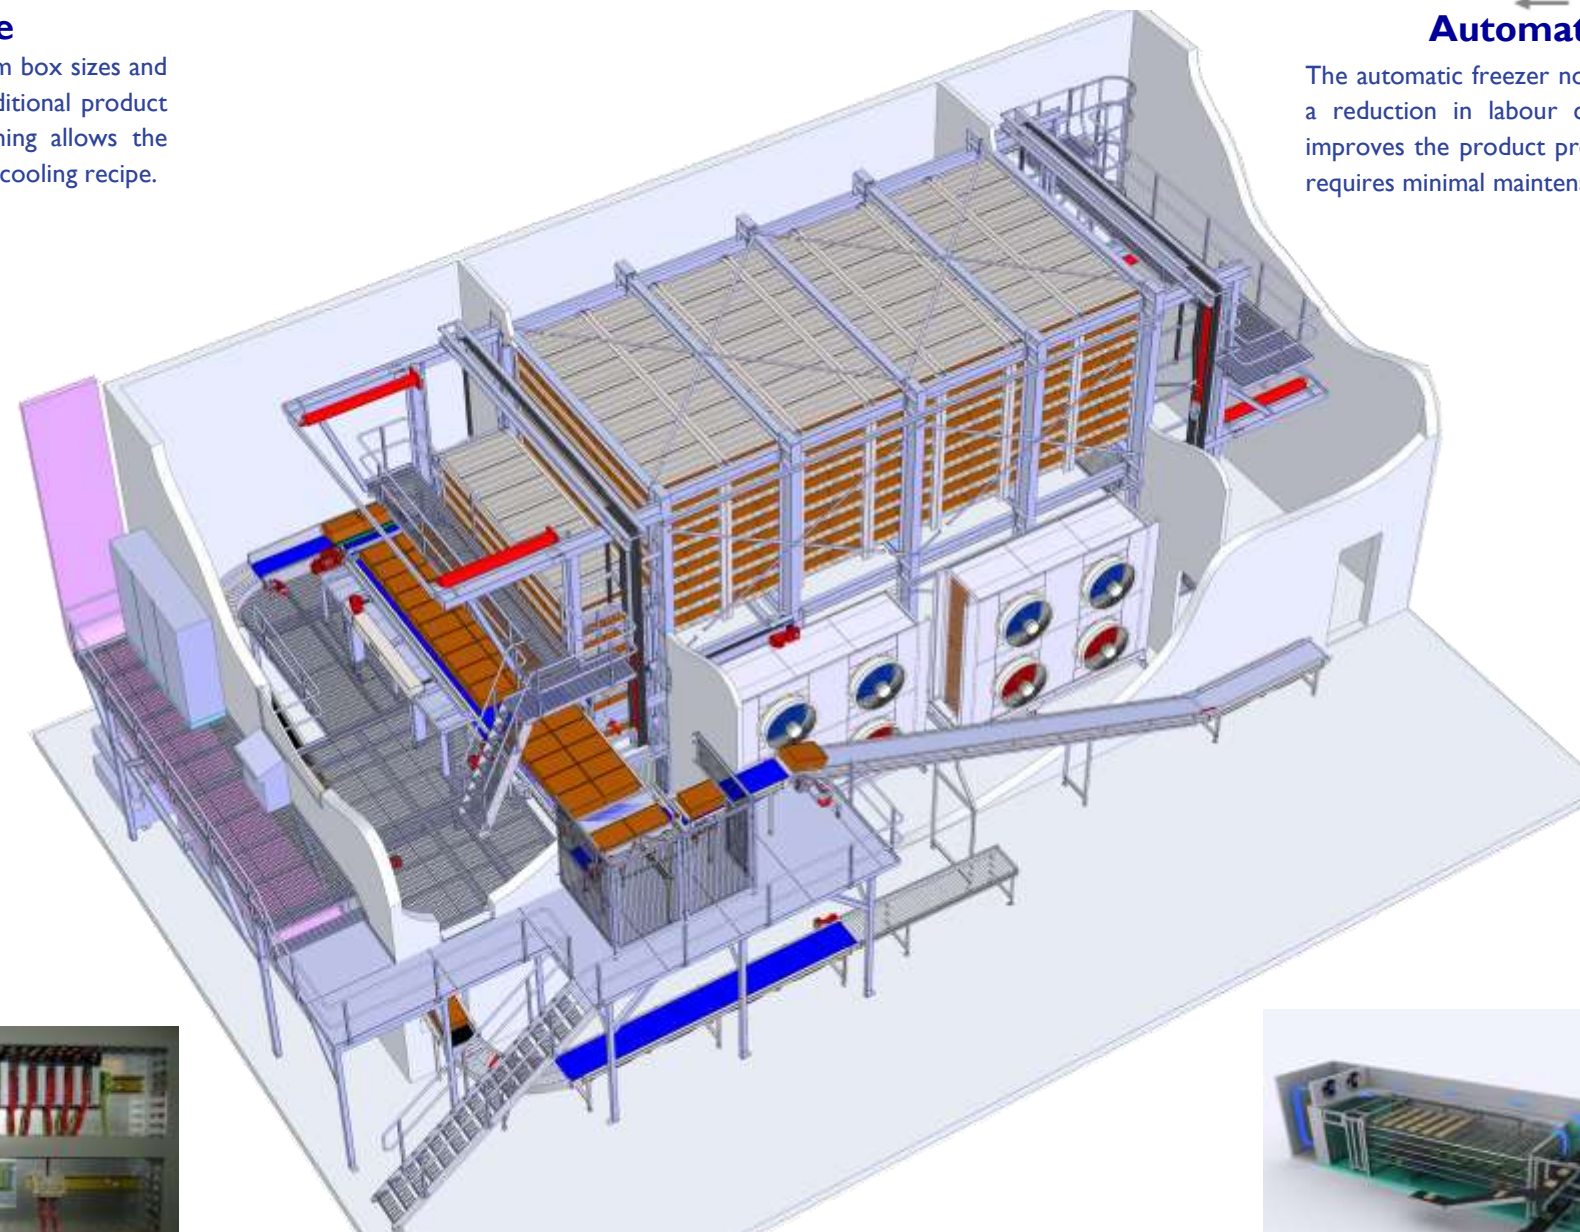

Automatic

The automatic freezer not only enables a reduction in labour costs but also improves the product presentation and requires minimal maintenance.

Bespoke

Each ACF is designed and built specifically to your requirements. The quantity of shelves and the overall dimensions can be customised to meet the required freezing capacity.

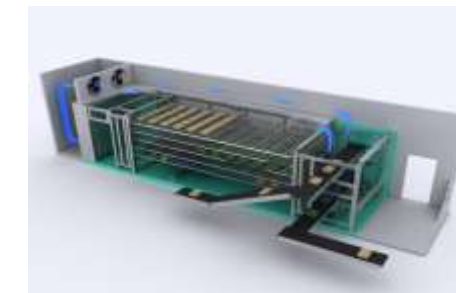

Efficient

The product gapping and air channelling technology of the ACF ensures precision power reduction cooling and can be as much as 45% more efficient than blast freezing.

Controls

The control system is simple and easy to use. Remote CCTV and HMI viewing allows the operator to monitor progress.

3D Modelling

3D modelling enables you to see all aspects of the ACF in detail prior to manufacture.
